

EEP 595: Privacy-Preserving Machine Learning – Spring 2026

Course Project #4– Project Presentation and Final Report

Assigned: Tuesday, May 12, 2026, **Due: Wednesday, June 10, 2026**

Instructor: Tamara Bonaci

Department of Electrical and Computer Engineering
University of Washington

1 Final Presentation and Project Report (Final Week)

At this point, you are ready to deliver a presentation of your project and submit your revised final report incorporating all feedback received.

1.1 Presentation

Each team will present for **8–10 minutes**), followed by a few questions. The presentation should be accessible to the rest of the class - assume your audience has taken the same course, but is not an expert on your specific topic. A demo is strongly encouraged where applicable.

1.2 Final Project Report

Please submit a revised version of your draft report. A brief appendix, noting what changes were made in response to peer and instructor feedback is required.

1.3 Grading Criteria

- **Presentation:** clarity, depth, quality of any demo, and handling of questions.
- **Final report:** improvement over the draft, incorporation of feedback, and overall technical quality and writing.
